

# Complete Security Monitoring

Moving to **proactive monitoring** from endpoint to cloud for complete security visibility

- 1) Detect and remediate faster and with more accuracy
- 2) Illuminate blind spots, defend from endpoint to cloud
- 3) Increase operational efficiency and eliminate errors
- 4) Improve security posture, situational awareness and risk visibility
- 5) Threat focused detection, whether external or insider

## Unlimited **infrastructure visibility**

Complete Security Monitoring delivers 24x7 real-time monitoring of activity across your infrastructure. This managed service stores, correlates and interrogates a significant variety of relevant log data from unlimited sources to build a clear picture of threats and create a comprehensive step-by-step remediation plan.

## Flexible - and **tailored to your need**

Every security asset and business system in your estate can be included in the scope of monitoring - we are able to integrate and build targeted detection content for any relevant source of log data.

This approach increases the likelihood of early detection and allows the service to focus on the most valuable customer assets, extracting increased value from existing security investments and optimising speed and accuracy in security operations and incident response.

We have never failed to integrate a log source and develop detection content. The solution supports several hundred log sources with new log sources regularly integrated.

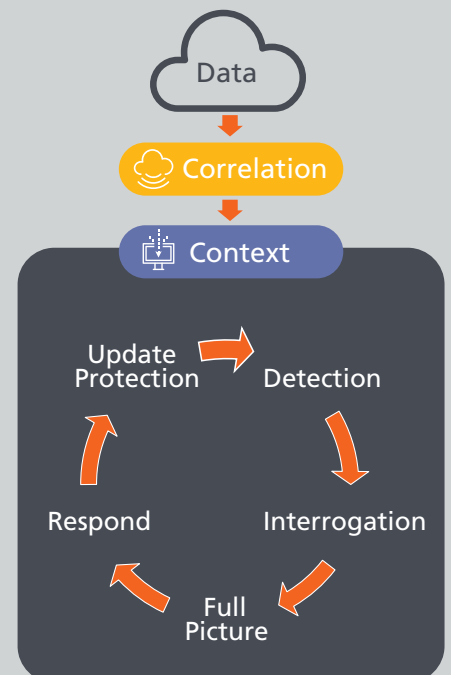

## **Cloud monitoring** as if it were on premise

Your choice to host infrastructure or services in the cloud does not affect our ability to monitor your assets. Complete security monitoring means exactly that: the service remains relevant throughout the contract as you execute on their cloud strategy.

BAE Systems has expertise in monitoring cloud infrastructure such as AWS and Azure, and can give the customer monitoring visibility into cloud applications such as O365, Box and security SaaS platforms like Symantec.Cloud.

## User cases for **detection**

- Policy enforcement (acceptable use)
- Intruder Detection
- Insider Detection
- Compliance
- Data Loss Detection
- Misconfiguration and vulnerability spotting

A Frictionless Process:  
Right Data, Right Detection, Right Response

# A Trusted Partnership

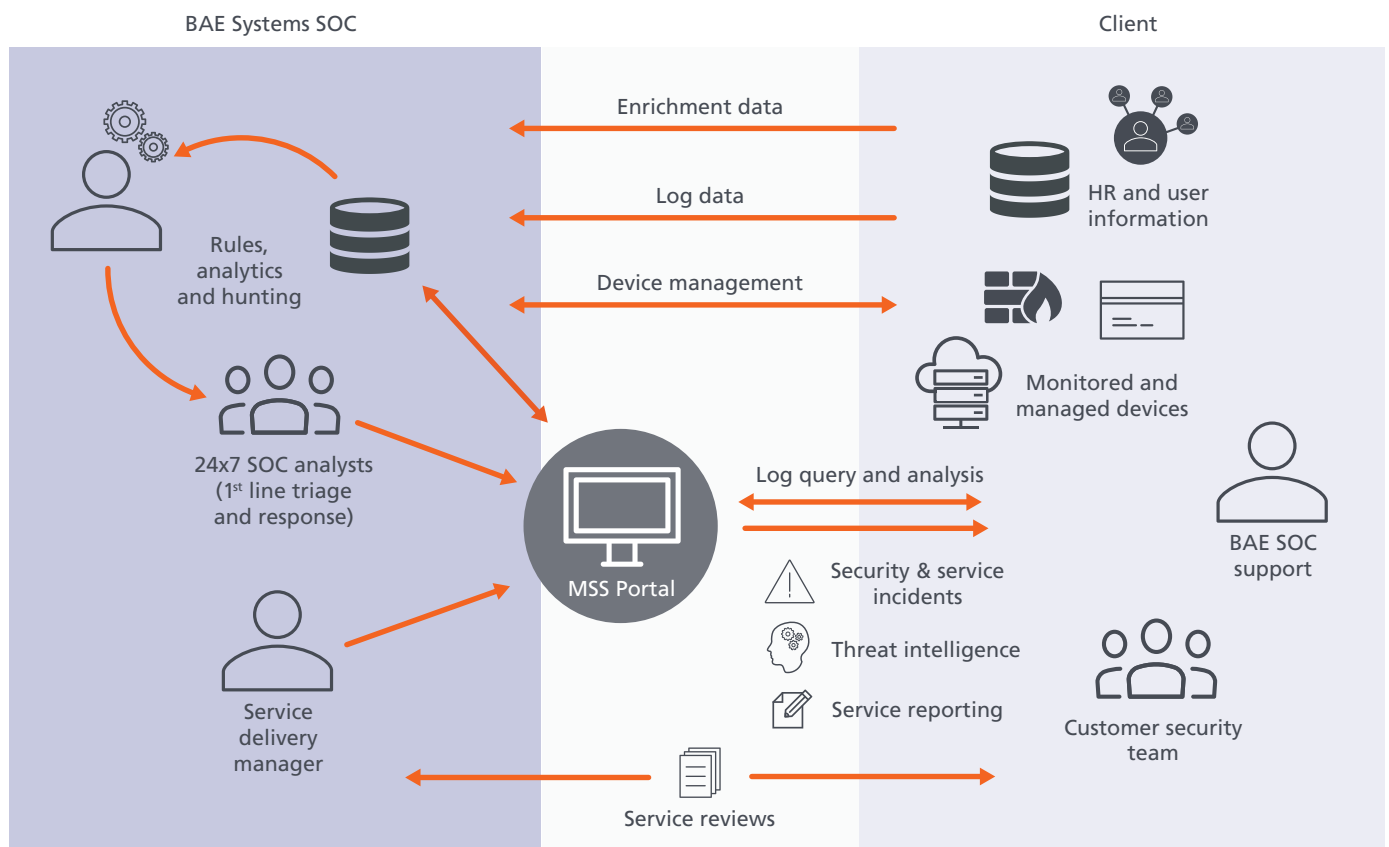

BAE Systems Managed Security Services are based around an advanced security operations methodology, trusted by governments and nation states. It is delivered around the clock from a dedicated SOC and analyst team to ensure that, regardless of your specific needs, our team understands your risk profile, behaviours and requirements.

## A Tailored Playbook Integrated processes and collaborative response

Complete Security Monitoring is tailored to customer needs and aligned to their unique threat profile and their organisational processes. This understanding of, and integration with, the customer allows information to flow to the right people, in the right format and at the right time. In turn improving the effectiveness and accuracy of threat detection and eliminating delay or friction in the response cycle.

## Comprehensive Remediation and Response Detailed, action-oriented resolution

Each customer receives comprehensive remediation advice, not just alerts. Customers have access to analysts to discuss every incident. This not only reduces the time to successful incident response, but in important cases, delivers all the information needed (scale, motive, techniques, impact) to give the customer confidence and control.
