

Email Security - anti-virus and anti-spam

Email Security (AV/AS) from BAE Systems blocks 100% of known viruses and 99.99% of unwanted email for the most secure mailbox available

Powerful anti-virus and anti-spam protection from the cloud security expert

An inbox full of spam can be quite aggravating. But spam can be more than a mere irritant. It often carries malicious software. And, in the guise of legitimate offers from real companies, spam can direct unknowing employees to websites that silently deposit malicious files or viruses.

New email viruses are released almost daily – any one of which can spread throughout your company within minutes. Unfortunately, most anti-virus programs are ineffective at fighting new email viruses because of the time required to research, locate, and deploy the latest virus definitions. The Email Security (AV/AS) service from BAE Systems is the exception.

Reduce exposure and liability

Email Security from BAE Systems reduces risk exposure and corporate liability by safeguarding your email with anti-virus and anti-spam technologies that block malicious software and spam at the gateway. It is not only compatible with Hosted Exchange and SilverSky Mail from BAE Systems, the service also works seamlessly in any deployment type – whether on-premise, hosted by BAE Systems, or elsewhere in the cloud.

Email Security supports all third party email including Google and Office 365 mailboxes and is protected by our real-time, expert security monitoring service.

Simple administration

- Sophisticated and safe web-based Security Management Console for easy policy control
- Easily set the message block, quarantine, tag, and delivery thresholds; manage message Allow and Block lists; and configure quarantine digest notifications
- Extensive reporting and analysis capabilities: daily activity graphs for spam detection, virus protection, and individual mailbox activity

Email Security benefits

- Decreased IT and administrative costs
- Increased employee productivity
- Reduced corporate liability

Cloud-based solution

- Our Email Security service is fully cloud-based. There is no need to purchase or manage costly hardware and software
- No migration or integration required

The trusted security experts

- 425 million security events that we review for customers each week
- 50 million emails filtered and cleansed weekly
- \$580 billion in customer assets protected
- 5,500+ secure and happy customers

The benefits of email security

Features	Benefits
Virus Scanning	All messages and attachments are scanned before delivery using the industry's leading anti-virus technologies from Trend Micro, Brightmail, and Cloudmark. Email Protection Services from BAE Systems leverage 24x7 real-time monitoring plus continuous updates to keep your messaging system secure from the latest threats.
Subscribed Block Lists	BAE Systems subscribes to several services, including Trend Micro's Network Reputation Services (RBL+) and Composite Blocking List (CBL), which maintain global block lists for unsafe domains, addresses, and SMTP relays.
Anti-Spam Utilities	We leverage multiple spam filtering engines from Symantec Brightmail Anti-Spam and Cloudmark Message Security Services to ensure that all spam is eliminated from your environment, while also providing protection against phishing attacks.
Marketing Email Check	Our Bulk/Marketing Email Check feature inspects and identifies inbound email containing marketing information to reduce operational burdens and safeguard company information.
