

# TARGETED ATTACK RESISTANCE ASSESSMENT.

HOW WELL CAN YOU WITHSTAND A CYBER ATTACK?

## DETERMINED ATTACKERS WILL SUCCEED

When targeting a specific organisation, a determined, well-resourced and knowledgeable cyber attacker will eventually succeed. With enough time and access to the right tools and techniques, they will adjust and re-adjust their approach until they find a way in.

Organisations facing such a determined threat often pose three key questions: How long will an attack take to succeed? How long before such an attack is detected? And how can defences be improved?

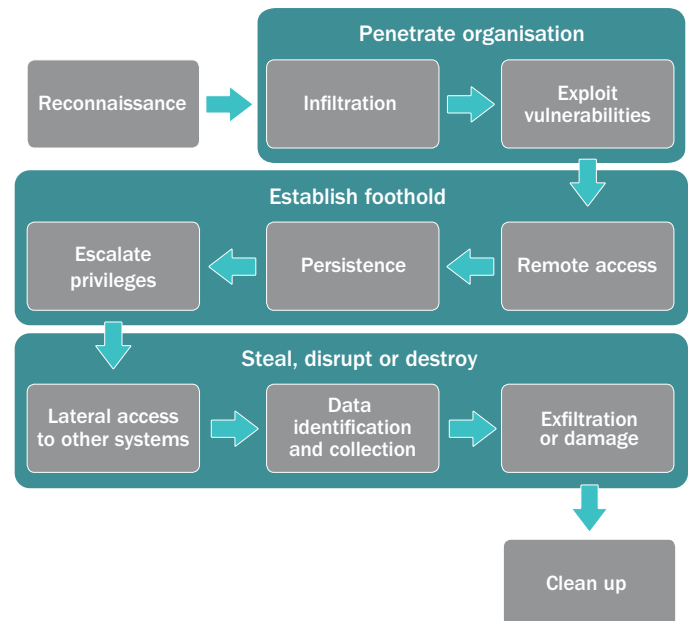

## MEASURING YOUR RESISTANCE

Our Targeted Attack Resistance Assessment systematically examines how well your organisation or network can withstand a targeted attack from a determined adversary.

We assess your ability to detect and defend against each stage of a targeted attack (shown right). We use the models, knowledge and experience we have developed over many years of investigating sophisticated attacks across the globe.

Our assessment provides you with an executive-level view of your resistance, supported by deep technical analysis and practical recommendations. As a result, your defence against targeted attacks will improve.

Realistic attack simulation to test the true robustness of your cyber security.

BAE Systems Target Attack model

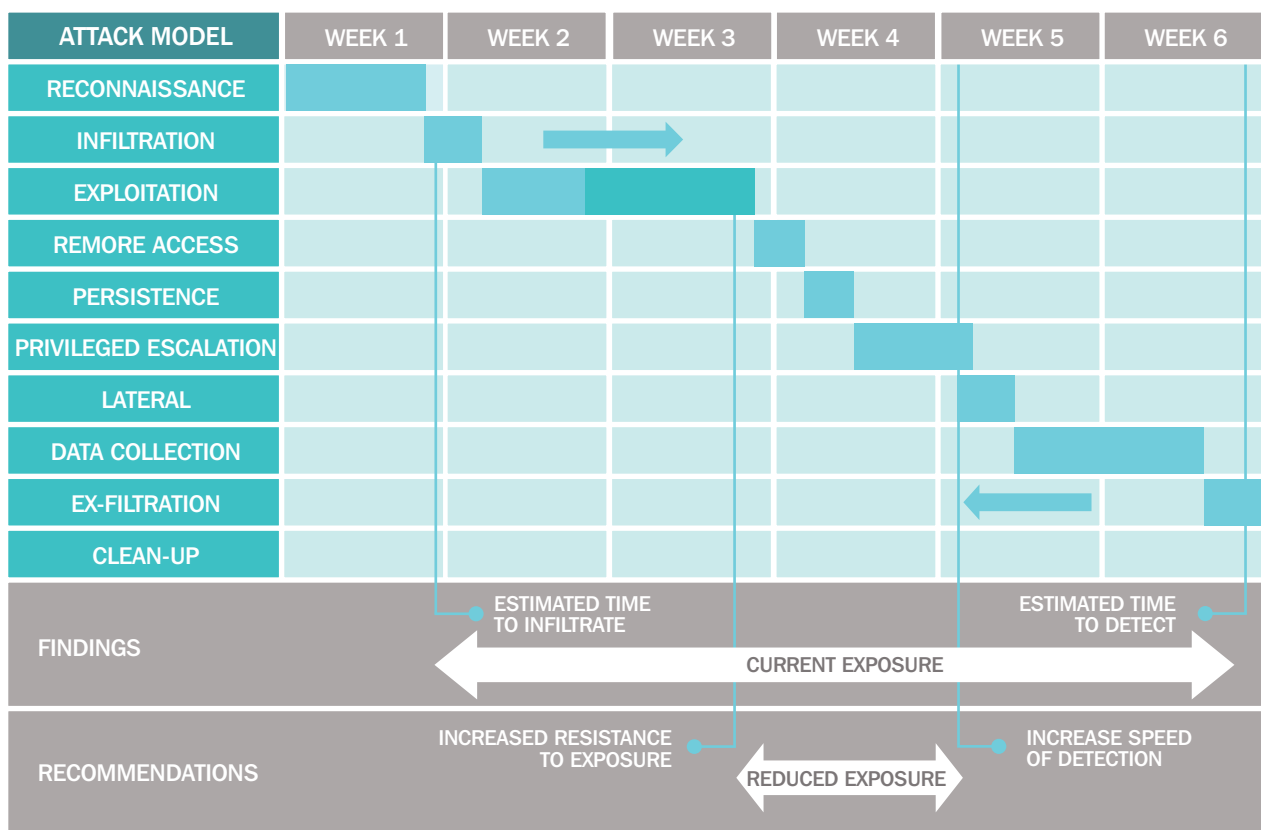

## FEATURES

- Threat intelligence led**  
 Our ongoing analysis of the tools and behaviours of the world's most sophisticated cyber attack groups provides relevance and realism to our assessment
- Active simulation**  
 We combine multiple attack techniques together in our assessment – just as a real attacker would in pursuit of their goal
- Structured approach**  
 We assess your detection and defence against each attack stage in isolation and in combination to pinpoint key areas for improvement
- Tailored to your needs**  
 Our assessment can focus on individual stages or the entire targeted attack model, allowing alignment to your key concerns

## BENEFITS

- Measures your true resistance so you can achieve the resilience you need to thrive in a world where cyber attacks are inevitable
- Diagnoses your specific weaknesses so you can spend your money where it counts
- Focuses on practical action so you can improve faster and more efficiently

### A Targeted Attack Resistance Assessment reduces your exposure to targeted attacks.
