RISR Station
Ruggedized Intelligence, Surveillance, and Reconnaissance (RISR)

www.baesystems.com/RISR
RISR provides an integrated situational awareness intelligence image, utilizing customer specified applications, local shared storage, and enterprise access to support real-time decision making.

We maintain the mission-defined software baseline and make recommendations on new applications based on customer needs. The system integrates a variety of data feeds including tactical signals intelligence and full-motion video, configured with commercial and government off-the-shelf applications to support specific mission needs. Additionally, every RISR has the ability to rapidly deploy in harsh environments and integrate with existing organic sensors, data feeds, and systems to disseminate intelligence back to the enterprise.

Key features and benefits
- Out-of-the-box operation eliminates tedious install and set-up procedures
- Ingestion, processing, exploitation, and dissemination of real-time data ensure essential mission information is received
- Access to a knowledge base of current software solutions enables tactical problem solving
- Operational display provides detailed picture of the battlespace
- Scalable pricing, easy-to-use interface, and variable form-factor enables applicability to a wide variety of missions

An experienced partner
BAE Systems leverages proven command, control, computing, communication and ISR systems experience to help transition a wide variety of customers from proprietary components and applications to mature commercial, off-the-shelf hardware and software. BAE Systems is uniquely experienced to design, develop and tailor commercial and government off-the-shelf solutions enabling your forces to maintain information dominance in any battlespace.
