

Is your company vulnerable to **cyber** attack?

We asked Singapore IT leaders how their cyber defences stack up.

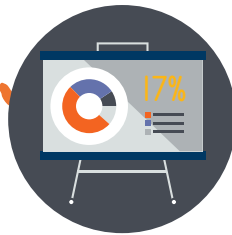

Over-optimistic?

While 89 per cent of respondents believed they had the right incident response plans in place, over 50 per cent had suffered an attack in the last year.

Financial impact

The average cost of their last attack was S\$692,088.

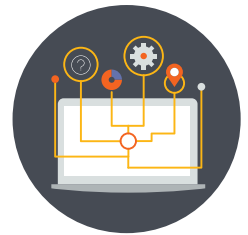

Bounce back

Less than a quarter surveyed are completely confident they could return to business as usual within 48 hours. 17 per cent are not very confident or had no confidence at all.

Absent security?

Five per cent don't have a cyber incident response plan and more than one in ten don't know if they have the right security controls in place.

Untested

Over one in five had not had their incident response plans tested in at least six months.
