

Is your company vulnerable to **cyber** attack?

We asked Malaysian IT leaders how their cyber defences stack up.

Over-optimistic?

95% of Malaysia IT decision makers are confident in their security controls, higher than respondents in US, Australia, UK, and Singapore (average 85% globally).

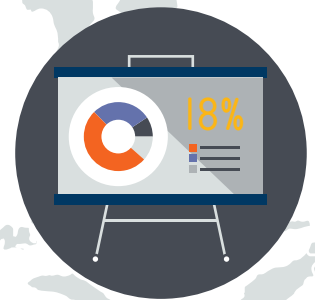

Caution

Yet 51% of those surveyed said they had experienced a cyberattack in the past year.

Financial impact

With the average cost being at least RM1,712,360 (GBP 320,667, EXR 5.12).

A contradiction

Only 18% of respondents were completely confident their organisation could return to business as normal within 48 hours of a successful cyberattack.
