An Intelligence Framework
for Achieving Your Mission

Epiphany

baesystems.com

Epiphany is an intelligence framework designed to assist organizations across all domains successfully achieve their missions by increasing organizational productivity through repeatable processes, knowledge sharing, and team collaboration. Cutting-edge core technology incorporates a dynamic framework that can be configured through a robust administrative interface to adapt to virtually any process.

Designed to be easy, simple and intuitive, Epiphany includes powerful features such as question and answer interfaces, electronic workflows and data repositories. It also provides in-depth analytic dashboards, and document templates along with advanced import/export, global search, scheduling, calendar, and email notification functionalities.

Robust security features include group and user level permissions and tailorable encryption levels for both fields and files. Epiphany is DFARS compliant and in the process of being added to the Approved Products List (APL).

Integrating Epiphany provides your organization with increased productivity, performance, security compliance, quality control, knowledge retention, and configuration management.

Key Features

- Increases productivity and efficiency
- Streamlines process management
- Securely organizes data
- Quick return on investment
- Improves quality control
- Eliminates redundancy
- Maximizes knowledge transfer/retention
- Encourages team collaboration
- Real-time reporting and visibility
- Adaptable and customizable
- Professional services available

Uses cases:

- State and Federal Regulatory Compliance
- Capability Maturity Model Integration (CMMI)
- Quality Management ISO 9001/AS9100
- Risk Management Framework (RMF)
- Software Development Lifecycle (SDLC)

Document Generation

Epiphany's document generation empowers administrators to import and configure document templates, which can then be populated through a series of simple questions. Utilizing administrator controlled data fields reduces redundancy and data entry repetition. Users simply answer a question once and the answer is populated in all linked fields. Reusable templates ensure consistent, accurate and quality documents. Completed and approved documents can then be exported out of the system for any purpose.

Process Management

Epiphany takes process management to the next level through customizable workflows, transitions, scheduling, and email templates. Using the intuitive graphical workflow designer, administrators can create workflows that simplify complex processes for efficient team collaboration. The system also allows users to link their packages, validate and share data, and schedule emails and reminders to your choice of users or groups. With Epiphany, users can view where they are in their workflow process at any time, instantly.

Data Storage

Epiphany provides data storage capabilities making it easy for organizations to manage their information through a built-in file repository with check-in/checkout and version control capabilities. Users can also create their own document repository by package. Epiphany tracks all metrics for reporting and auditing purposes, and provides users with data visibility through highly configurable dashboards and reports.

Information Management

A value-added feature includes archiving and cloning packages allowing historical data to be retrieved and shared. Global and package comments promote collaboration and enable organizations to better track and audit business processes. The system segregates data and provides easy options for exporting and saving.

Versatile

Designed to be versatile, Epiphany can be used anywhere, whether on a standalone laptop, deployed to the Cloud, or on an internal network. It is DFARS and 508 compliant, meeting regulations for use in multiple environments. Epiphany also provides users with options to customize its appearance to meet either organizational or individual user preferences.
