BAE SYSTEMS

Mission success starts with mission readiness

In today's increasingly complex and dynamic global environment, the U.S. and our allied nations require a trusted partner to support their critical missions. At BAE Systems, we recognize that delivering cutting-edge Electronic Warfare (EW) systems is just the beginning. With a commitment to mission success that extends far beyond initial delivery, we stand with our customers throughout our products' entire life cycle, prioritizing optimized system availability, reduced operational costs, and minimized downtime. Whether it's through our post-delivery product support or the way we think about the entire life cycle, we're dedicated to ensuring mission readiness and delivering value to our customers – for life.

Our product support focus has demonstrated significant results. Our performance-based contracting activities have shown increased system availability while reducing the cost per flight hour. Our partnership with U.S. depots and allied partners has increased the overall repair capability and helped meet the core and 50/50 requirements.

BAE Systems continues to look at innovation and investment opportunities for continued improvements on how we meet our values of being **ready, relevant, and robust.**

READY

BAE Systems has established a dedicated repair and sustainment facility with surge capacity to handle increased demands, ensuring 24/7 availability of its products and services. Our latest offerings incorporate life cycle planning, featuring module-level fault isolation and remove and replace capabilities that require no unique test equipment, resulting in fast mean time to repair and a reduced logistics footprint. Through innovative, performance-based solutions, we are committed to delivering 100 percent availability of mission-critical systems, providing unparalleled support and reliability to our customers.

RELEVANT

A key differentiator for BAE Systems is our ability to apply the latest technology from new programs to legacy products, enhancing their reliability, performance, and capability. Our modules are designed with Diminished Manufacturing Sources (DMS) resilience and easier upgrades in mind. By utilizing data analytics, mission simulation software tools, and emerging technologies like additive manufacturing, augmented reality, and artificial intelligence (AI), we optimize product support planning and identify opportunities for improvement. With a deep understanding of customer requirements, we develop tailored upgrade solutions that improve capability, reliability, and maintainability.

ROBUST

With over 50 years of experience supporting EW systems for the Department of War and international customers, BAE Systems has developed a deep understanding of product support and logistics. We help customers build robust strategies and provide flexible, responsive support through performance-based contracts. By innovating and driving down costs, we mitigate the risk of system retirement and enable customers to maintain operational effectiveness over the long term.
