Storm EW™ Spectrum Warfare Suite

Dominate the electromagnetic battlespace

BAE SYSTEMS

The warfighter advantage is diminishing as threat rings expand and air dominance becomes more complex. Near-peer adversaries and emerging threats require leap-ahead technology to maintain the competitive advantage, ensure freedom of maneuver, and win the next fight.

Full-spectrum dominance

Our Storm EW™ spectrum warfare suite is a platform-agnostic electronic warfare (EW) solution that offers the perfect blend of offensive and defensive capabilities, enabling the warfighter to transform modern airborne combat.

Derived from advanced, integrated EW system programs, this solution offers end-to-end capabilities that can be integrated onto new or existing aircraft. Using a common core architecture, we leverage funded and fielded technology into this scalable offering to maximize capacity, capability, and interoperability for our combatant commanders, partners, and allied forces.

Elevating the future of EW

We proactively transformed our business model to develop technologies that outpace threats, own the spectrum, and create unrelenting electromagnetic dominance for airborne warfighters. We invested more than \$150 million in our production facilities, including three state-of-the-art microwave manufacturing factories, and are committed to delivering performance and the highest quality products on time to our customers. We have the production capability in place with available growth to meet increasing demand. Our experience, manufacturing capabilities, and global support network substantially accelerate fielding and drive down total life cycle cost creating the most compelling EW portfolio investment option.

Benefits

- Next-generation defensive and offensive EW capabilities enable the warfighter to successfully execute the mission.
- 360-degree situational awareness and rapid electronic attack response improves freedom to maneuver, self-protection, and combat capability.
- Platform-agnostic approach supports a variety of aircraft, making it versatile and cost effective.
- Rapidly adapts to emerging threats at the speed of relevance.
- Compatibility with blue-force radio frequency emitters provides a critical battlefield advantage.
- Common architecture across combat air platforms optimizes life cycle cost, while lowering operational and sustainment expenses.
- Modular design enables rapid technology insertion.
