

Mortar precision

The terminally guided, top-attack, anti-armour, mortar projectile STRIX with a 120 mm full calibre warhead is designed specifically to target and destroy armored vehicles, including MBTs. STRIX uses a top-attack profile, where it seeks out the heat signature of a target and strikes it from above. It's handled and used as a conventional mortar round, but performs like an advanced guided missile. With STRIX, the mortar is transformed into a weapon of high precision.
