# RAZER™ Precision Guided Munition

Utilising mass-produced munitions to achieved air launched affordable mass.

RAZER™ is being developed to address the global need for air launched affordable mass by providing a low-cost guidance and wing kit that transforms mass produced 155mm artillery and 5-inch naval munitions into air launched precision guided munitions.

RAZER™ is designed for delivery in kit form, with no energetics allowing it to be stored independent of the munition in a standard warehouse, and transported using standard logistics assets. The kit is able to be assembled around the selected munition and custom fuze in the field as required without the use of special tools.

The design with standard 14" lug spacing in accordance with MIL-STD-8591, provides a standard interface for carriage on air platform. For non-standard interfaces, the lugs can be removed and replaced with alternative fixtures as required. While the baseline RAZER™ utilises mass produced 155mm artillery and 5 inch naval munitions, the wing kit concept is payload agnostic, allowing the use of alternative payloads or the scaling of the product to suit specific payload requirements.

By leveraging more than 30 years of experience in the development and manufacture of Guided Weapons in Australia, RAZER™ will deliver trusted, innovative and affordable capability to the battlefield.

## Performance summary of RAZER™

Length	1440 mm
Wingspan	1575 mm
Width wings folded	336 mm
Mass empty	18 kg
Payload	155 mm / 5" naval
Mass with L15 munition	~62kg
Guidance	GPS/INS
Fusing	Point detonation
Glide ratio	> 7.5 : 1
Interfaces	14" lug spacing IAW MIL STD

### SCALABLE

for other munition types and bespoke payloads

### LOGISTIC

specific considerations not required

### TRUSTED

with over 30 years of guided weapons experience

### PAYLOAD AGNOSTIC

to deliver tailorable battlespace solutions

### LOW COST

for affordable mass
