

Information & Communications Technology

Military Messaging

BAE Systems Australia is a leading provider of integrated solutions for Defence and related customers. Drawing upon our global experience to deliver strong project management, analysis, engineering, systems integration and support capabilities, BAE Systems Australia is able to create and deliver tailored solutions to unique and exacting requirements.

One of the company's key strategic capabilities is Intelligence and Information Systems. By responding to the demands of a rapidly evolving market in defence and homeland security, BAE Systems Australia faces the challenge of integrating systems effectively as they become increasingly complex. The company provides highly reliable, time critical systems by developing, integrating and supporting Information and Communications Technology (ICT) systems and products.

Integrated COTS

BAE Systems Australia's Military Messaging solutions are built from Commercial Off The Shelf (COTS) components. Our solutions have been integrated and proven with many varying COTS components, some of which are already owned by the Department of Defence.

BAE Systems Australia is committed to integrating COTS components and will collaborate with Defence to integrate the right solution to minimise risk and delivery times. By standardising integrated solutions we will achieve efficient and effective information delivery.

Flexibility

BAE Systems Australia can accommodate a flexible approach to application delivery. Our solutions can be built with operationally proven rich and thin client options and either can be deployed within the same solution. Our rich client can be integrated within our standard operating environment, our thin client can be delivered through a standard web browser. The benefit to this capability is in provision of a scalable solution that can be crafted around the specific requirements for cost of ownership balanced with security and accountability.

Tactical Operation

With a proven history of delivering Military Messaging systems that work over the most difficult of conditions, like HF, BAE Systems Australia maintains the expertise required to deliver a next generation tactical messaging solution for Australia.

Working closely with the research institutes that are developing the next generation of multicasting protocols, we have a world leading solution that surpasses all current protocols.

Interoperability

The Allied Gateway offered by BAE Systems Australia has a proven interoperability record. We have combined this with a boundary protection solution that is the world leader. The Legacy Gateway's also offer the only solution that manages interoperability with no loss of data or services.

Through-life support

BAE Systems Australia has built a large team of Military Messaging professionals focused on providing leading edge technology and advice. We invest in the development and currency of our expertise resulting in our solutions remaining current with international technology trends. BAE Systems Australia provides 24 hour, 7 days a week, local support for key services and products in order to focus on client needs.

Cost of ownership

By building on industry leading technologies, we aim to marry our products with existing systems used by Defence. Our streamlined and simplified approach to ICT also results in lower support costs.
