1 Introduction

The following environmental requirements are applicable to indirect suppliers, i.e. suppliers that are providing products and services to BAE Systems that will not be used in BAE Systems products or systems.

Requirement documents and guidelines are available at the Supplier Network web page (www.baesystems.com/karlskoegasupplier).

2 General requirements

2.1 Environmental legislation

The Supplier shall, as a minimum, comply with applicable environmental legislation and, when relevant, fulfil the requirements of ISO 14001. Formal certification is recommended and viewed as a merit during supplier assessment.

2.2 Eco-labelled products and services

The Supplier shall primarily offer BAE Systems products and services that are eco-labelled. It shall also be the Supplier's aim to replace any existing noneco-labelled product with eco-labelled alternatives.

2.3 Sustainable Development

BAE Systems operates a Sustainable Development Policy. We expect and encourage all our suppliers to embrace similar standards to our own and will work with them to share best practice and stimulate improved performance where needed.

2.4 Special handling at disposal

The Supplier shall provide information on whether the product is covered by any form of producer responsibility or other provisions that involve special handling at disposal. This may mean that the product shall be returned to the Supplier for end of life treatment.

2.5 Environmental charges

Environmental charges linked to the product shall be included in the quoted price.

Informationsklass <i>Classification</i> Ö/Unclassified					

3 Additional requirements

The product or service may be such that additional environmental requirements may be set. These shall be specified in the major contract and are applicable as a supplement to the requirements in this document. In the event of conflict between the requirements, the major contract shall be applied.

4 Compliance and audit

4.1 Compliance

The Supplier shall, at the request from BAE Systems, be able to show that the requirements in this document and additional requirements are being fulfilled.

4.2 Audit

BAE Systems has the right to audit the Supplier regarding compliance with the requirements in this document.
