

# Cross Domain Solutions JMS Proxy

Unrivalled Security

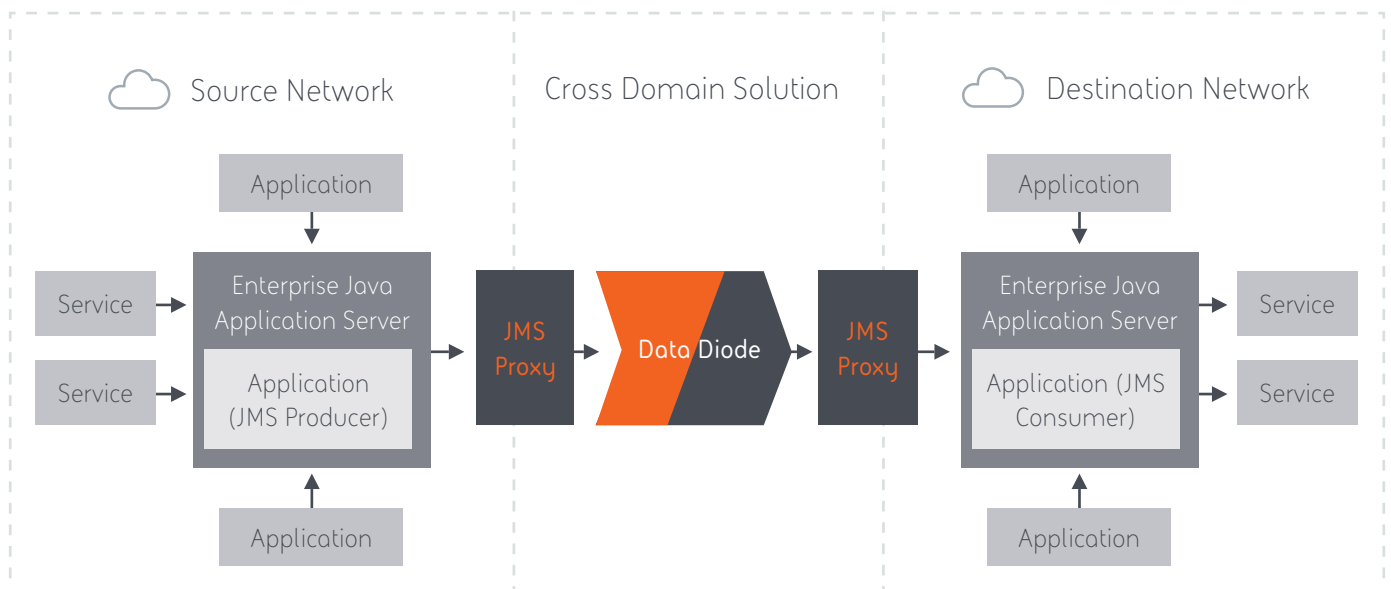

## Why use Java Message Service?

Many businesses and organisations apply a Service-Oriented Architecture (SOA) to their enterprise software, where applications are integrated using re-usable services that communicate in a uniform and well-defined manner. An enterprise service bus is used to control the interactions between services and applications in an SOA. Java Message Service (JMS) is a messaging protocol that can be used by an enterprise service bus to facilitate messaging within an SOA.

## What is the JMS Proxy?

The Java Message Service Proxy (JMSP) is one of the Data Pump Application software components. It enables one-way transfer of JMS messages across a BAE Systems Data Diode device. It can be used to securely connect SOA environments by allowing messages to flow from services and applications on the source network to those on the destination networks.

## How does it work?

JMS messages are stored on one or more queues, which are hosted on an Enterprise Java Application Server (such as JBoss or Glassfish). The application server is connected to, or forms part of, an enterprise service bus.

On the source network, JMSP subscribes to one or more queues, and transmits all messages on that queue across the Data Diode. On the destination network, JMSP publishes all messages it receives onto the queues it is configured to publish to. This allows an application or service on the source network to produce messages which are then consumed by an application on the destination network, as though the producer and consumer are part of the same SOA environment.

## Technical Specifications

Supported Protocols	JMS 1.1
Configuration	<ul style="list-style-type: none"><li>- Console-based Configuration Client</li><li>- Web Configuration Client (Optional)</li></ul>
Auditing & Monitoring	<ul style="list-style-type: none"><li>- Log files</li><li>- Syslog</li><li>- SNMP traps (v1 &amp; v3)</li><li>- Web Configuration Client (Optional)</li></ul>
Minimum Hardware	<ul style="list-style-type: none"><li>- 8-Core 2.9GHz</li><li>- 32GB RAM</li><li>- Fibre NIC (for connection to Data Diode)</li></ul>
Operating Systems	<ul style="list-style-type: none"><li>- Red Hat Enterprise Linux 6 and 7</li></ul>
