

Advanced Components Obsolescence Management (AVCOM)

AVCOM is the most complete obsolescence management solution available. This application features state-of-the-art, system-specific capabilities with unmatched service. Our Diminishing Manufacturing Sources (DMS) management process loads your system and delivers instantaneous obsolescence identification, impact analysis and solution options. AVCOM also offers real-time component status and real-time procurement, along with alerts to provide early warnings of obsolescence.

AVCOM is tailored to your needs. Our experts work to customize the application for your system or systems and your organization. We also facilitate other engineering and manufacturing capabilities, from technical data packages to parts redesign.

AVCOM is a proven solution. In 2000, it was selected by the U.S. Air Force Material Command as the primary tool for DMS program management throughout the USAF. We continually improve and enhance AVCOM to meet the dynamic landscape of the market.

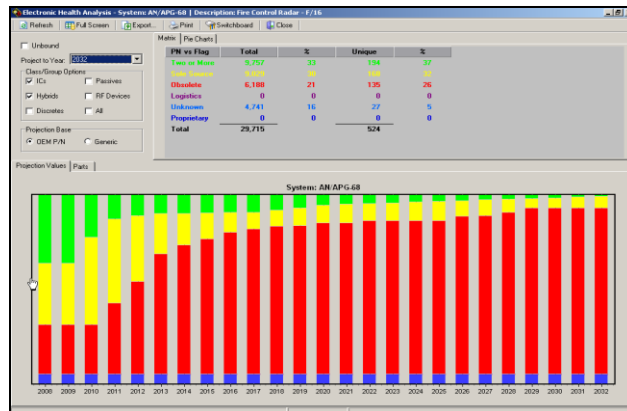

Building a strong team is essential to succeeding in the battle against obsolescence. Our solution provides the experience, expertise and tools necessary to establish a complete DMS management program. AVCOM offers proven engineering, logistics, program management with the unique capabilities to overcome the DMS issues facing government and industry today.

BAE Systems offers obsolescence management solutions that include electronic, non-electronic and COTS obsolescence tracking, component health analysis at any level, and on-demand component engineering support. These tiered products address all Diminishing Manufacturing Sources (DMS) program and funding requirements — a real advantage when confronting the challenge of DMS.

Obsolescence Management

- Obsolescence Assessment & Monitoring
- Operational Impact Analysis
- Logistic Sustainment Analysis
- Automated Obsolescence Notification
- Solutions Sharing

- Full service obsolescence management provider
- USAF DMS “Tool of Choice” since 2000
- DMS Team of the year award 2007, 2008 and 2009
- On-demand component engineering support
- Full spectrum of obsolescence management tools and services from a single part look-up tool to full turnkey enterprise solution

- Identification of Part Commonality Across Platforms
- Automated DMS Case development
- Obsolescence Health Analysis
- COTS Management
