

# A NEW TRAINING MODEL FOR TYPHOON

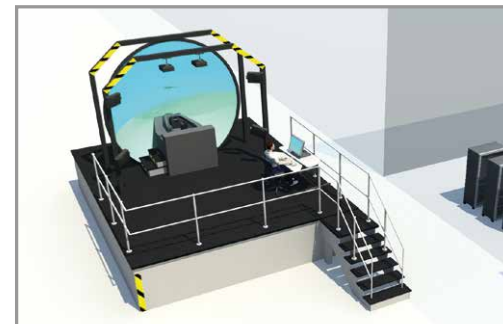

**BAE SYSTEMS**

A new PC based Weapon System Simulation is providing Typhoon pilots with a more realistic synthetic training environment than ever before.

Representing the latest software developments on the aircraft, pilots can now train at the same standard of the most recent aircraft, even before they are in service.

## THE WIDER BATTLESPACE

Using the latest simulation, pilots can link into the wider simulated battlespace environment introducing other assets into the mix such as the E3D Sentry and the Type 45 Destroyer.

## COCKPIT TRAINERS

The pilot flies the aircraft from a fully representative cockpit with a view of the outside world 'wrapped' around him.

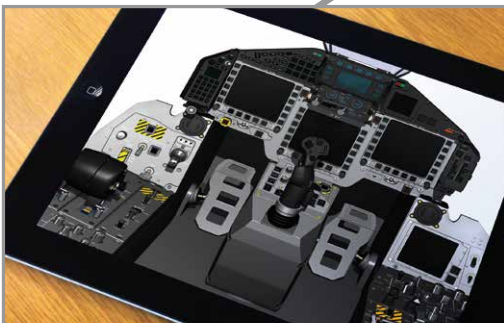

## WEAPON SYSTEMS SIMULATION (WSS)

A PC based simulation that plugs and plays into a range of training devices.

## PORTABLE DEVICES

The simulation can be run on a variety of portable devices such as laptops and tablets.

## DESKTOP TRAINERS

A classroom based solution to satisfy varying training needs.
