

NetReveal Payments Fraud

Identify and block payment fraud faster and smarter using the latest behavioral profiling, anomaly detection and machine learning techniques

The challenge

Keep payment fraud in check and customers happy as settlement times shrink and new ways to pay are adopted.

"Removing friction from customer journey" was listed at #2 of top 10 global trends for retail banking in 2019

The Financial Brand

The volume, speed and sophistication of attacks across multiple channels are growing and payment infrastructures are exposed to greater threats. The combination of cyber, banking malware, socially engineered and organized crime fraud is being used to attack retail and corporate accounts alike.

Open banking initiatives are driving payment disintermediation in a world subject to increasing regulation. Meeting fraud threshold targets is critical for banks that want unfettered access to new opportunities whilst keeping their services closed to criminals.

BAE Systems named a **"RiskTech Quadrant Category Leader"** for enterprise fraud technology solutions, in the Financial Crime Risk Management Systems: Enterprise Fraud, Market Update 2018

Our approach

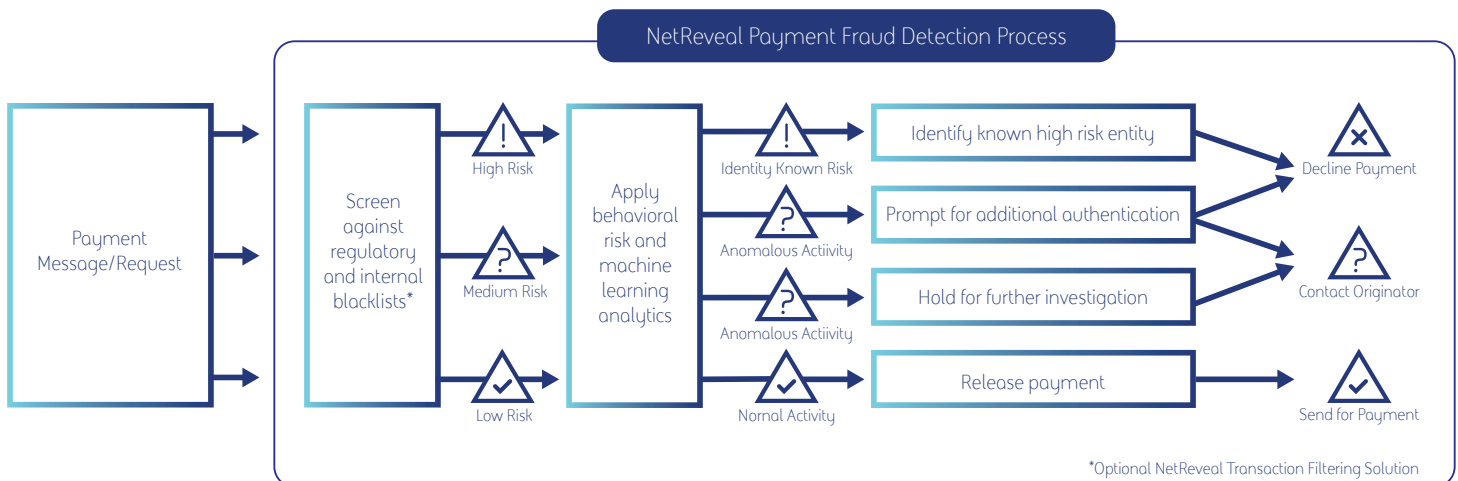

NetReveal® Payments Fraud deploys a proven combination of predictive analytics and machine learning techniques to uncover suspicious behavior. Drawing data from throughout the retail and corporate payments ecosystems, it assesses both monetary and non-monetary information for each transaction.

NetReveal provides:

- **Smarter alert generation** – Constant monitoring of pre-defined thresholds and rapid adjustment of pre-set rules and predictive models
- **Streamlined fraud operations** – Reduced investigation time and expense by automating transaction interdiction, incident assignment, event visualization and reporting
- **User behavior monitoring across all channels** – Connect suspicious activities and follow account holders as they navigate and execute payments across traditional and digital services
- **Open Banking / PSD2 Ready** – Constant monitoring of pre-defined thresholds and instant adjustment of detection models. Includes configurable Transaction Risk Analysis (TRA) rulesets that power risk-based decisions for Strong Customer Authentication (SCA)
- **Granular Governance** – With full model audit and explainability the NetReveal Advanced Analytics Platform empowers citizen data scientists to create, enhance and monitor detection models in alignment with compliance frameworks

Additional capabilities

Scenario self-service	Improves agility and reduces cost by enabling in-house teams to configure or tune detection models without vendor involvement. Our Managed Analytics Service can be called upon to augment in-house teams or provide expert guidance on combatting the latest evolving financial crime scenarios. This ensures the ultimate choice for covering temporary shortfalls in analyst capacity.
Enterprise-wide deployment supporting multiple lines of business	NetReveal is capable of being deployed across a complex international group-wide segregated organizational hierarchy. Field-level security enables institutions to comply with local data privacy regulations.
Integrated Case Management	A consolidated platform for standardizing processes and investigator experience across all channels. Flexibly and efficiently organizes inputs (including aggregated third-party data), prioritizes alerts, and helps manage investigations.
Flexible Deployment Choice	NetReveal is available as an on-premise deployment or a cloud-based solution.
Modern Decoupled Architecture	Results in lower costs with a system that is easier to maintain and upgrade. NetReveal is a technologically advanced platform, incorporating appropriate use of open source technologies.
Continuous Data Streaming	Reduced infrastructure for the same level of throughput whilst ensuring faster detection despite rising transaction volumes and shorter settlement times.
Entity-Based Investigations	Improves investigator efficiency and detects more fraud by linking atomized behavioral patterns, rather than focusing on individual symptoms. As a result a more reliable and complete profile of suspicious actors is continuously updated.
A single platform for money laundering compliance and fraud prevention	Financial institutions benefit from lower total cost of ownership across their compliance and fraud teams with a single solution.
