**FAST IT**

**The opportunity**

In today’s fast-paced digital world, organisations need responsive IT systems that can adapt quickly to market changes, customer expectations and take advantage of new business opportunities. BAE Systems’ FAST IT solutions transforms mission critical platforms to reduce total cost of ownership, accelerate time to market and improve the pace of digital change.

- **30%** typical project saving
- **15%** increase in delivery pace
- **5%** TCO reduction

**Accelerate agility**

Core operational, mission critical IT systems that form the back-end of an organisation’s IT infrastructure need to be just as agile and flexible as customer-facing digital user interfaces. However, the evolution of back-end systems, often over a number of years, means they can be complex, cumbersome and less adaptable than modern digital platforms. An agile IT architecture can accelerate the transformation of established back-end systems to digital platforms. Not only will it deliver faster speed to market, it will reduce costs - both in terms of project overhead and total cost of ownership – so that both OPEX and CAPEX costs are lowered.

BAE Systems uses the right combination of FAST IT solutions - Open Source, cloud and DevOps – to deliver mission critical systems that are tailored to your business needs.
Our solutions are agile, scalable and cost effective. They support your business making it more agile and optimising your cyber security.

Thanks to our heritage in engineering innovation, we’re relied on to develop and maintain critical national assets. We know how to apply best of breed technologies and programme management techniques to the most complex of deliveries.

**How we helped**

We recently worked with a global marine services company. Through benefits-focused business analysis we developed a compelling proof of concept in just 11 days that helped us to secure the confidence of the company’s board. Our portfolio of Open Source frameworks and technologies allowed us to securely re-platform a number of critical applications, using the best of DevOps and automation to deliver results quickly, helping the company make significant ongoing TCO savings.

"You have delivered in 8 weeks what would have taken our previous supplier 8 months."

CTO, global marine professional services company.

**Why BAE Systems?**

We create leading edge technologies and great experiences. Our work with FTSE 100 companies, public sector organisations, government departments and the UK Security Services shows that we can be relied upon to deliver on our commitments. We always constructively challenge and take the initiative, working together with your executives to make sure you achieve your business objectives.

**Unlock your past**

**Unleash the future**

**Accelerate to digital**
