The challenge

Unlike retail and corporate banking, correspondent banking relationships carries the additional risk of executing financial transactions on behalf of customers of another institution (a respondent bank), operating outside of your Know Your Customer (KYC), due diligence, and Anti-Money Laundering (AML) transaction monitoring programs. This gives correspondent banks limited visibility into the individuals or entities of the other institutions, which makes it difficult to understand the identity and associated risk of beneficiaries and originators.

Non-compliance with AML transaction monitoring for correspondent banks can result in fines, reputational loss and a reduction in share value and market confidence, however, correspondents must often depend on the respondent bank or relationship managers, who may have conflicting interests. Differing AML, bank secrecy laws, accounting, and taxation standards as well as legal, investigation and language difficulties make it all the more challenging.

NetReveal AML for Correspondent Banking provides end-to-end money laundering detection and investigation specifically designed to meet the needs of correspondent banking services organisations, enabling greater insight and oversight of transactions and customer relationships that pass through your institution.

Our approach

NetReveal AML for Correspondent Banking enables financial institutions to:

- **Ensure comprehensive compliance** — monitor correspondent relationships and the funds flowing through accounts at both the relationship and the sub-customer levels
- **Uncover hidden risks** — identify unusual transaction profiles, correspondent nesting, and transactions related to unknown counterparties, originators, and beneficiaries
- **Increase accuracy and efficiency** — automate alert prioritisation, report completion, and workflow tasks, helping analysts focus on the highest risks
- **Keep pace with changing regulations** — adapt to evolving financial and regulatory needs with the flexibility to meet changing global regulations and business use cases
- **Work across geographic boundaries and regulatory jurisdictions** — supports international typologies aligned to regulators and governing bodies, including FATF, EU, UN, OCC, NYDFS, NCA, FINTRAC, and BaFin.

BAE Systems positioned as a “Major Player” in IDC Financial Insight’s AML and KYC solutions

## Additional capabilities

<table>
<thead>
<tr>
<th>Feature</th>
<th>Benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Advanced AML detection</td>
<td>Screens transactions which flow through your institution using risk variables to detect and monitor suspicious transactions and activities of your correspondent customers</td>
</tr>
<tr>
<td>Comprehensive customer and sub-customer monitoring</td>
<td>Profiles respondent relationships, as well as second (sub-customers) and third-degree customers (pseudo-customers) of a respondent bank, for activities indicative of money laundering, including the risk associated with correspondent nesting</td>
</tr>
<tr>
<td>Flexible, analyst-centric configuration</td>
<td>Ensures AML typologies can be understood by analysts and auditors alike, with user-configurable detection logic that can be communicated, extended, and updated by your staff as needed</td>
</tr>
<tr>
<td>Complete compliance oversight</td>
<td>Provides critical visibility into your AML processes and workload via management dashboards, view, enabling you to identify process bottlenecks and allocate your investigative resources quickly and effectively</td>
</tr>
<tr>
<td>Streamlined AML processes</td>
<td>Enhances monitoring, productivity, and investigation efficiency with packaged AML detection, risk-based triage of alerts and customers, and disclosure filing automation</td>
</tr>
<tr>
<td>Risk-based approach</td>
<td>Minimises reputational and regulatory exposure both in alert generation and prioritisation, utilising a risk-based approach instead of prescriptive rules or thresholds</td>
</tr>
<tr>
<td>Management and regulatory reporting</td>
<td>Supports disclosure of regulatory reports, automating the creation, population, and filing of regulatory reports in a number of different national and international regulatory formats</td>
</tr>
