Complete protection is impossible. Focus on faster and more accurate detection and response.

Detection and Response can only detect and respond to what it can see. Limiting the sources of data or types of data gives a narrow view. By seeking to improve security, you could be creating silos of detection and response.

Get Managed Detection and Response Right

By 2020 – 60% of Enterprise budgets will be allocated to rapid detection and response approaches (20% today) - Gartner

Detection and Response in Silos gives a False Sense of Security

Increased False Positives and Negatives

Duplicates of Alerts

Increased Resource

Human, Data and Analytic Silos

Lots of Data vs Big Data

Achieve Organisation-wide Detection and Response

Maximise Data

Maximum Content

Correlation applied across domains

Coordinated Investigation

Coordinated Response

Get ahead of the Attack

Detection and Response Earlier in the Kill chain

Consolidated data from many sources allows confident early detection and a more complete response

To learn more about how BAE Systems is delivering on business-wide detection and response, contact us at BAEsystems.com/detectandrespond

By using human, data and analytic silos, organizations can create silos of detection and response. By consolidating data from many sources, organizations can achieve confident early detection and a more complete response.
