Covert operations in the battlefield remain essential to avoid military orders, tactical plans and movements being intercepted and exploited by the enemy. Meeting these demanding operational challenges, Cayman allows military leaders and their operators to securely pass critical tactical information that can alter the very nature of the joint, combined battle.

Whatever the level of information to be exchanged - from a command order to a change in coordinates of a target, bull’s eye, or key area - Cayman safeguards that the data is transmitted or received in a timely and secure manner.

Developed by BAE Systems, Cayman is a link independent Tactical Data Link (TDL) processor for Land, Maritime and Air platforms and equipment. Contributing to the Common Operating Picture, Cayman provides friendly and enemy location and positioning situational awareness information.

Access to Cayman’s secure TDL communications allows you to share situational awareness, deconfliction warnings and command and control intelligence over a multitude of tactical and strategic ranges.

Embedded synthetic real-time operator training lets you train as you fight, and fight as you train.
WITH THE KNOWLEDGE AND UNDERSTANDING OF THE 3D BATTLEFIELD, CAYMAN DELIVERS CRITICAL SITUATIONAL AWARENESS FOR YOU TO EXPLOIT THE TACTICAL ADVANTAGE
